

Revision of British Standard for Gaps Gates & Stiles

The British Standard is in the process of being revised and any comment on these structures **or on electric fencing or barbed wire or cattle grids** (which are also being reviewed) would be much appreciated.

Technical detail, user issues (size, shape, ease of use, appearance, etc), authorisation matters, any and all comment would be appreciated.

Post this form to 12 Woodlands Road, BUSHEY, WD23 2LR
or E-mail to bsiworkingparty@pathwork.co.uk or Phone 01923-211113

Gap, Gate, Stile, Electric Fence, Barbed Fence, Cattle Grids issues:

Any problems that you know that path structures (Gap Gate Stile Fence Wire) have caused you or someone else?

Any particular design or feature that makes for a good structure?

Any preference between wooden and metal structures, and why?

Any views on, or problems with, structures that are no longer needed for controlling animals (eg when land is now arable)?

Any safety issues?

Could the structure be improved for those with mobility problems, even fairly minor ones? How?

Anything else?
